14. The authors of the present study have been concerned with the question of whether the use of a single, standard, non-validated questionnaire is sufficient to assess the prevalence of mental health problems in a community sample. The results of the present study suggest that the use of a single, standard, non-validated questionnaire is not sufficient to assess the prevalence of mental health problems in a community sample. The results of the present study suggest that the use of a single, standard, non-validated questionnaire is not sufficient to assess the prevalence of mental health problems in a community sample.
