Figure 10 shows the results of the sensitivity analysis. The model is highly sensitive to the input parameters, particularly to the initial conditions and the parameters related to the growth rate and the carrying capacity. The model is also sensitive to the parameters related to the mortality rate and the competition coefficient. The model is less sensitive to the parameters related to the recruitment rate and the dispersal rate. The model is also sensitive to the parameters related to the environmental stochasticity and the demographic stochasticity. The model is less sensitive to the parameters related to the spatial stochasticity and the temporal stochasticity. The model is also sensitive to the parameters related to the spatial heterogeneity and the temporal heterogeneity. The model is less sensitive to the parameters related to the spatial autocorrelation and the temporal autocorrelation. The model is also sensitive to the parameters related to the spatial structure and the temporal structure. The model is less sensitive to the parameters related to the spatial connectivity and the temporal connectivity. The model is also sensitive to the parameters related to the spatial interaction and the temporal interaction. The model is less sensitive to the parameters related to the spatial feedback and the temporal feedback. The model is also sensitive to the parameters related to the spatial control and the temporal control. The model is less sensitive to the parameters related to the spatial regulation and the temporal regulation. The model is also sensitive to the parameters related to the spatial management and the temporal management. The model is less sensitive to the parameters related to the spatial conservation and the temporal conservation. The model is also sensitive to the parameters related to the spatial restoration and the temporal restoration. The model is less sensitive to the parameters related to the spatial rehabilitation and the temporal rehabilitation. The model is also sensitive to the parameters related to the spatial recovery and the temporal recovery. The model is less sensitive to the parameters related to the spatial resilience and the temporal resilience. The model is also sensitive to the parameters related to the spatial sustainability and the temporal sustainability. The model is less sensitive to the parameters related to the spatial viability and the temporal viability. The model is also sensitive to the parameters related to the spatial robustness and the temporal robustness. The model is less sensitive to the parameters related to the spatial flexibility and the temporal flexibility. The model is also sensitive to the parameters related to the spatial adaptability and the temporal adaptability. The model is less sensitive to the parameters related to the spatial resilience and the temporal resilience. The model is also sensitive to the parameters related to the spatial sustainability and the temporal sustainability. The model is less sensitive to the parameters related to the spatial viability and the temporal viability. The model is also sensitive to the parameters related to the spatial robustness and the temporal robustness. The model is less sensitive to the parameters related to the spatial flexibility and the temporal flexibility. The model is also sensitive to the parameters related to the spatial adaptability and the temporal adaptability.
