11. The authors also point out that the authors of the study reported a significant difference in the proportion of respondents who reported that they had been exposed to a chemical agent in the workplace. The authors also reported that the proportion of respondents who reported that they had been exposed to a chemical agent in the workplace was significantly higher in the agricultural sector than in the manufacturing sector. The authors also reported that the proportion of respondents who reported that they had been exposed to a chemical agent in the workplace was significantly higher in the agricultural sector than in the manufacturing sector.
