5. *Conclusions* The results of this study suggest that the use of a single, standardized, and validated questionnaire is a feasible and reliable method for assessing the prevalence of mental health problems in a community sample. The results also suggest that the prevalence of mental health problems is higher in the community than in the clinical setting. This finding is consistent with the results of other studies that have found that the prevalence of mental health problems is higher in the community than in the clinical setting. The results also suggest that the prevalence of mental health problems is higher in the community than in the clinical setting. This finding is consistent with the results of other studies that have found that the prevalence of mental health problems is higher in the community than in the clinical setting.
