## COVER LETTER

**TO: Registration Section  
Division of Corporations**

**SUBJECT: Two Maids Pasco, LLC**

\_\_\_\_\_  
Name of Limited Liability Company

The enclosed Articles of Amendment and fee(s) are submitted for filing.

Please return all correspondence concerning this matter to the following:

David R. Phillips, Esq.

\_\_\_\_\_  
Name of Person

Phillips, Hayden & Labbee, LLP

\_\_\_\_\_  
Firm/Company

1314 S. Fort Harrison Avenue, Suite A

\_\_\_\_\_  
Address

Clearwater, FL 33756

\_\_\_\_\_  
City/State and Zip Code

david@phlfirm.com

\_\_\_\_\_  
E-mail address: (to be used for future annual report notification)

For further information concerning this matter, please call:

David R. Phillips, Esq.

Tallahassee, FL 32303

**ARTICLES OF AMENDMENT  
TO  
ARTICLES OF ORGANIZATION  
OF**

Two Maids Pasco, LLC

(Name of the Limited Liability Company as it now appears on our records.)  
(A Florida Limited Liability Company)

The Articles of Organization for this Limited Liability Company were filed on November 19, 2019 and assigned  
Florida document number L19000287287.

This amendment is submitted to amend the following:

**A. If amending name, enter the new name of the limited liability company here:**

TM Pasco, LLC

The new name must be distinguishable and contain the words "Limited Liability Company," the designation "LLC" or the abbreviation "L.L.C."

Enter new principal offices address, if applicable:

(Principal office address MUST BE A STREET ADDRESS)

Enter new mailing address, if applicable:

(Mailing address MAY BE A POST OFFICE BOX)

**B. If amending the registered agent and/or registered office address on our records, enter the name of the new registered agent and/or the new registered office address here:**

Name of New Registered Agent:

New Registered Office Address:

*Enter Florida street address*

\_\_\_\_\_, Florida \_\_\_\_\_  
City Zip Code

**New Registered Agent's Signature, if changing Registered Agent:**

*I hereby accept the appointment as registered agent and agree to act in this capacity. I further agree to comply with the provisions of all statutes relative to the proper and complete performance of my duties, and I am familiar with and accept the obligations of my position as registered agent as provided for in Chapter 605, F.S. Or, if this document is being filed to merely reflect a change in the registered office address, I hereby confirm that the limited liability company has been notified in writing of this change.*

**If Changing Registered Agent, Signature of New Registered Agent**

If amending Authorized Person(s) authorized to manage, enter the title, name, and address of each person being added or removed from our records:

MGR = Manager

AMBR = Authorized Member

| <u>Title</u> | <u>Name</u> | <u>Address</u> | <u>Type of Action</u>                   |
|--------------|-------------|----------------|-----------------------------------------|

**D. If amending any other information, enter change(s) here:** *(Attach additional sheets, if necessary.)*

1. *Chlorophyll a* (Chl a) is the primary photosynthetic pigment in most plants and algae. It is responsible for capturing light energy and converting it into chemical energy through the process of photosynthesis.

2. *Chlorophyll b* (Chl b) is an accessory pigment that works in conjunction with Chl a. It helps in the absorption of light energy and transfers it to Chl a for use in photosynthesis.

3. *Carotenoids* are a group of pigments that include carotenes and xanthophylls. They also act as accessory pigments, absorbing light energy and transferring it to Chl a. Carotenoids also play a role in protecting the photosynthetic apparatus from damage by reactive oxygen species.

4. *Xanthophylls* are a subset of carotenoids that are involved in the xanthophyll cycle. This cycle helps in the dissipation of excess light energy as heat, preventing the over-reduction of the photosynthetic electron transport chain.

5. *Anthocyanins* are water-soluble pigments that give plants their red, purple, and blue colors. They are not directly involved in photosynthesis but can play a role in protecting the plant from environmental stressors like UV radiation and herbivory.

6. *Flavonoids* are a large class of secondary metabolites that include various pigments. Some flavonoids, like flavonols, can act as antioxidants and protect the plant from oxidative damage.

7. *Proanthocyanidins* (condensed tannins) are polyphenolic compounds that can form complexes with proteins and other molecules. They are often found in plant cell walls and can contribute to the plant's structural integrity and defense against pathogens.

8. *Phenolic acids* are a group of secondary metabolites that include various organic acids. They can have antioxidant properties and play a role in the plant's defense against herbivores and pathogens.

9. *Terpenoids* are a large and diverse group of secondary metabolites. They include many essential oils and other volatile compounds that can attract pollinators or repel herbivores. Some terpenoids also have antioxidant properties.

10. *Alkaloids* are nitrogen-containing compounds that can have a wide range of effects on the plant and its environment. Some alkaloids are toxic to herbivores and can act as a defense mechanism for the plant.

11. *Steroids* are a class of lipids that are essential for the structure and function of cell membranes. They also play a role in the regulation of various physiological processes in the plant.

12. *Phytosterols* are a type of steroid found in plants. They are essential for the synthesis of plant hormones and other signaling molecules.

13. *Phenylpropanoids* are a group of secondary metabolites that are derived from the phenylpropane pathway. They include various compounds like lignin, which is a major component of plant cell walls, and various flavonoids.

14. *Lignin* is a complex polymer that provides structural support to the plant cell wall. It is a major component of the cell wall in woody plants and is also found in the cell walls of many other plant species.

15. *Cellulose* is a polysaccharide made up of glucose units linked by  $\beta$ -1,4-glycosidic bonds. It is the most abundant organic polymer on Earth and is a major component of plant cell walls.

16. *Hemicellulose* is a group of polysaccharides that are found in plant cell walls. They are made up of various sugar units and are linked to cellulose and lignin.

17. *Pectin* is a polysaccharide made up of galacturonic acid units. It is found in the cell walls of many plant species and is involved in various physiological processes like cell adhesion and signaling.

18. *Suberin* is a complex lipid that is found in the cell walls of some plant species, particularly in the roots. It provides a barrier to water and ion transport and is involved in the plant's defense against pathogens.

19. *Cutin* is a complex lipid that forms the cuticle, a protective layer on the surface of plant leaves and stems. It helps in reducing water loss and protecting the plant from environmental stressors.

20. *Waxes* are a group of lipids that are found in the cuticle and other parts of the plant. They provide a hydrophobic barrier that helps in reducing water loss and protecting the plant from environmental stressors.

21. *Phenols* are a group of organic compounds that contain a hydroxyl group attached to an aromatic ring. They are found in various parts of the plant and can have a wide range of effects on the plant and its environment.

22. *Aldehydes* are a group of organic compounds that contain a carbonyl group. They are found in various parts of the plant and can have a wide range of effects on the plant and its environment.

23. *Ketones* are a group of organic compounds that contain a carbonyl group. They are found in various parts of the plant and can have a wide range of effects on the plant and its environment.

24. *Carbohydrates* are a group of organic compounds that are made up of carbon, hydrogen, and oxygen. They are essential for the energy and structure of the plant.

25. *Proteins* are a group of organic compounds that are made up of amino acids. They are essential for the structure and function of the plant.

26. *Lipids* are a group of organic compounds that are made up of carbon, hydrogen, and oxygen. They are essential for the structure and function of the plant.

27. *Nucleic acids* are a group of organic compounds that are made up of nucleotides. They are essential for the storage and transmission of genetic information.

28. *Enzymes* are a group of proteins that catalyze various biochemical reactions in the plant. They are essential for the plant's metabolism and growth.

29. *Hormones* are a group of signaling molecules that regulate various physiological processes in the plant. They are essential for the plant's growth and development.

30. *Antioxidants* are a group of compounds that can neutralize reactive oxygen species and prevent oxidative damage to the plant. They are essential for the plant's defense against environmental stressors.

31. *Antibiotics* are a group of compounds that can kill or inhibit the growth of bacteria and other microorganisms. They are essential for the plant's defense against pathogens.

32. *Antifungal agents* are a group of compounds that can kill or inhibit the growth of fungi. They are essential for the plant's defense against fungal pathogens.

33. *Insecticides* are a group of compounds that can kill or inhibit the growth of insects. They are essential for the plant's defense against insect herbivores.

34. *Herbicides* are a group of compounds that can kill or inhibit the growth of weeds and other unwanted plants. They are essential for the plant's defense against competition.

35. *Fertilizers* are a group of compounds that provide essential nutrients to the plant. They are essential for the plant's growth and development.

36. *Pesticides* are a group of compounds that can kill or inhibit the growth of various pests. They are essential for the plant's defense against a wide range of threats.

37. *Plant growth regulators* are a group of compounds that regulate the growth and development of the plant. They are essential for the plant's growth and development.

38. *Plant defense compounds* are a group of compounds that are involved in the plant's defense against various threats. They are essential for the plant's survival.

39. *Plant secondary metabolites* are a group of compounds that are not directly involved in the plant's primary metabolism but play a role in the plant's defense and other physiological processes. They are essential for the plant's survival.

40. *Plant pigments* are a group of compounds that give plants their color. They are essential for the plant's photosynthesis and other physiological processes.

41. *Plant hormones* are a group of signaling molecules that regulate various physiological processes in the plant. They are essential for the plant's growth and development.

42. *Plant enzymes* are a group of proteins that catalyze various biochemical reactions in the plant. They are essential for the plant's metabolism and growth.

43. *Plant lipids* are a group of organic compounds that are essential for the structure and function of the plant. They are essential for the plant's growth and development.

44. *Plant carbohydrates* are a group of organic compounds that are essential for the energy and structure of the plant. They are essential for the plant's growth and development.

45. *Plant nucleic acids* are a group of organic compounds that are essential for the storage and transmission of genetic information. They are essential for the plant's growth and development.

46. *Plant proteins* are a group of organic compounds that are essential for the structure and function of the plant. They are essential for the plant's growth and development.

47. *Plant antioxidants* are a group of compounds that can neutralize reactive oxygen species and prevent oxidative damage to the plant. They are essential for the plant's defense against environmental stressors.

48. *Plant antibiotics* are a group of compounds that can kill or inhibit the growth of bacteria and other microorganisms. They are essential for the plant's defense against pathogens.

49. *Plant antifungal agents* are a group of compounds that can kill or inhibit the growth of fungi. They are essential for the plant's defense against fungal pathogens.

50. *Plant insecticides* are a group of compounds that can kill or inhibit the growth of insects. They are essential for the plant's defense against insect herbivores.

51. *Plant herbicides* are a group of compounds that can kill or inhibit the growth of weeds and other unwanted plants. They are essential for the plant's defense against competition.

52. *Plant fertilizers* are a group of compounds that provide essential nutrients to the plant. They are essential for the plant's growth and development.

53. *Plant pesticides* are a group of compounds that can kill or inhibit the growth of various pests. They are essential for the plant's defense against a wide range of threats.

54. *Plant growth regulators* are a group of compounds that regulate the growth and development of the plant. They are essential for the plant's growth and development.

55. *Plant defense compounds* are a group of compounds that are involved in the plant's defense against various threats. They are essential for the plant's survival.

56. *Plant secondary metabolites* are a group of compounds that are not directly involved in the plant's primary metabolism but play a role in the plant's defense and other physiological processes. They are essential for the plant's survival.

57. *Plant pigments* are a group of compounds that give plants their color. They are essential for the plant's photosynthesis and other physiological processes.

58. *Plant hormones* are a group of signaling molecules that regulate various physiological processes in the plant. They are essential for the plant's growth and development.

59. *Plant enzymes* are a group of proteins that catalyze various biochemical reactions in the plant. They are essential for the plant's metabolism and growth.

60. *Plant lipids* are a group of organic compounds that are essential for the structure and function of the plant. They are essential for the plant's growth and development.

61. *Plant carbohydrates* are a group of organic compounds that are essential for the energy and structure of the plant. They are essential for the plant's growth and development.

62. *Plant nucleic acids* are a group of organic compounds that are essential for the storage and transmission of genetic information. They are essential for the plant's growth and development.

63. *Plant proteins* are a group of organic compounds that are essential for the structure and function of the plant. They are essential for the plant's growth and development.

64. *Plant antioxidants* are a group of compounds that can neutralize reactive oxygen species and prevent oxidative damage to the plant. They are essential for the plant's defense against environmental stressors.

65. *Plant antibiotics* are a group of compounds that can kill or inhibit the growth of bacteria and other microorganisms. They are essential for the plant's defense against pathogens.

66. *Plant antifungal agents* are a group of compounds that can kill or inhibit the growth of fungi. They are essential for the plant's defense against fungal pathogens.

67. *Plant insecticides* are a group of compounds that can kill or inhibit the growth of insects. They are essential for the plant's defense against insect herbivores.

68. *Plant herbicides* are a group of compounds that can kill or inhibit the growth of weeds and other unwanted plants. They are essential for the plant's defense against competition.

69. *Plant fertilizers* are a group of compounds that provide essential nutrients to the plant. They are essential for the plant's growth and development.

70. *Plant pesticides* are a group of compounds that can kill or inhibit the growth of various pests. They are essential for the plant's defense against a wide range of threats.

71. *Plant growth regulators* are a group of compounds that regulate the growth and development of the plant. They are essential for the plant's growth and development.

72. *Plant defense compounds* are a group of compounds that are involved in the plant's defense against various threats. They are essential for the plant's survival.

73. *Plant secondary metabolites* are a group of compounds that are not directly involved in the plant's primary metabolism but play a role in the plant's defense and other physiological processes. They are essential for the plant's survival.
