D. If amending any other information, enter change(s) here: *(Attach additional sheets, if necessary.)*

1. The first step in the process of the scientific method is to ask a question. This question should be based on an observation or a problem that needs to be solved. For example, a scientist might observe that a plant grows faster in one location than another and ask, "What factors affect plant growth?"

2. The second step is to do background research. This involves reading books, articles, and other sources to learn what is already known about the topic. This helps the scientist to understand the problem better and to develop a hypothesis.

3. The third step is to form a hypothesis. A hypothesis is a statement that can be tested. It is based on the background research and the question. For example, a hypothesis might be, "If a plant is given more water, then it will grow faster."

4. The fourth step is to test the hypothesis. This is done by conducting an experiment. The scientist will set up a controlled experiment where only one factor is changed (the independent variable) and the effect on the plant growth is measured (the dependent variable). For example, the scientist might give one plant more water than another and measure the height of both plants over time.

5. The fifth step is to analyze the data. The scientist will collect data from the experiment and look for patterns. This might involve creating a graph or a table. The scientist will then compare the results to the hypothesis to see if it was supported or not.

6. The sixth step is to draw a conclusion. Based on the analysis of the data, the scientist will decide if the hypothesis was supported or not. If the hypothesis was supported, the scientist might repeat the experiment to confirm the results. If the hypothesis was not supported, the scientist might revise the hypothesis and test it again.

7. The final step is to communicate the results. The scientist will write a report or publish a paper about the experiment and the results. This allows other scientists to read about the work and to use the information in their own research.

F. Effective date, if other than the date of filing: _____ (optional)

(If an effective date is listed, the date must be specific and cannot be prior to date of filing or more than 90 days after filing.) Pursuant to 605.0207 (3)(b)

Note: If the date inserted in this block does not meet the applicable statutory filing requirements, this date will not be listed as the document's effective date on the Department of State's records.

If the record specifies a delayed effective date, but not an effective time, at 12:01 a.m. on the earlier of: (b) The 90th day after the record is filed.
