^a The values are calculated from the following equation: $\text{C}_{\text{max}} = \frac{\text{AUC} \times F}{t_{0.5}}$, where C_{max} is the maximum plasma concentration; AUC is the area under the curve; F is the bioavailability; t_{0.5} is the half-life.

14. The fact that the charges are applied with the same frequency, intensity and in the same way, in the example of a light of a certain color through a glass plate, is that the light does not change the frequency of the applied or transmitted photons, but only the speed of propagation. That is, a photon that has the same wavelength as the incident photon will have the same frequency as the incident photon, but the speed of propagation will be different.
