8. The following are the results of a regression analysis of the relationship between the number of hours per week a person works and the number of hours per week a person exercises. The regression equation is $\hat{y} = -0.05x + 1.5$, where x is the number of hours per week a person works and y is the number of hours per week a person exercises. The coefficient of determination is $R^2 = 0.64$. Interpret the coefficient of determination.

1. *Chlorophyll a* (Chl *a*) is the primary photosynthetic pigment in most plants and algae. It is a green pigment that absorbs light energy in the blue and red regions of the visible spectrum.

Figure 1. Schematic diagram of the experimental setup. The subject is seated in a chair and views the target through a video camera. The target is a horizontal line on a screen. The distance between the subject and the target is 100 cm. The target is divided into three segments: a central segment (10 cm) and two side segments (10 cm each). The subject is required to move the hand to the target and maintain it there for a specified duration.
