$$p_{\alpha\beta} = p_{\beta\alpha} = \frac{1}{2} \left(\delta_{\alpha\beta} + \frac{1}{2} \delta_{\alpha\beta} \right) = \delta_{\alpha\beta}$$
[illegible]
$$u_1 = \frac{1}{2} \left(\frac{1}{2} + \frac{1}{2} \right) = \frac{1}{2}, \quad u_2 = \frac{1}{2} \left(\frac{1}{2} - \frac{1}{2} \right) = 0.$$

7. The Commission has also been informed that the Government of India has been requested to provide information on the progress of the implementation of the recommendations of the Commission's report on the subject.

1. The first group of people who are interested in the study of the history of the world are the historians. They are people who study the past and try to understand what happened and why it happened. They use a variety of sources, including books, documents, and artifacts, to reconstruct the past. They also try to understand the people who lived in the past and how they thought and felt. Historians are interested in the lives of people from all times and places, and they try to understand the world as it was and how it has changed over time.

4. *Conclusions*—The results of this study indicate that the use of a single, low-dose, short-acting benzodiazepine, such as lorazepam, is an effective and safe method of sedation for the conscious, cooperative, and nonventilated patient. The use of a single, low-dose, short-acting benzodiazepine, such as lorazepam, is an effective and safe method of sedation for the conscious, cooperative, and nonventilated patient.

1. The first group of respondents (n = 10) was asked to identify the most important factors influencing their decision to use a particular technology. The results showed that the most important factors were the ease of use, the perceived benefits, and the perceived risks. The second group (n = 10) was asked to identify the most important factors influencing their decision to use a particular technology. The results showed that the most important factors were the ease of use, the perceived benefits, and the perceived risks. The third group (n = 10) was asked to identify the most important factors influencing their decision to use a particular technology. The results showed that the most important factors were the ease of use, the perceived benefits, and the perceived risks.

1. *Abstract* The purpose of this study was to determine the effect of a 12-week training program on the physical fitness and health-related quality of life (HRQL) of elderly people. The study was conducted in a community center in a large city in Brazil. The participants were 30 elderly people (mean age = 68.5 years) who were randomly divided into two groups: a control group (n = 15) and an exercise group (n = 15). The exercise group performed a 12-week training program consisting of aerobic, strength, and flexibility exercises. The control group did not participate in any training program. The physical fitness and HRQL were assessed at baseline and at the end of the 12-week period. The results showed that the exercise group had significant improvements in physical fitness and HRQL compared to the control group. The improvements were observed in all the variables measured, including aerobic capacity, strength, flexibility, and the SF-36 HRQL score. The findings suggest that a 12-week training program can improve the physical fitness and HRQL of elderly people.

$$m = \frac{1}{2} \left(\frac{1}{\alpha} + \frac{1}{\beta} \right) \quad \text{and} \quad f = \frac{1}{2} \left(\frac{1}{\alpha} - \frac{1}{\beta} \right).$$

Figure 1. Schematic diagram of the experimental setup. The subject is seated in a chair and views the target through a video camera. The target is a light source that is controlled by a computer. The subject's hand is positioned on a horizontal surface. The distance between the hand and the target is 10 cm. The subject is instructed to move the hand towards the target. The video camera records the hand's position and the target's position. The computer calculates the distance between the hand and the target and provides feedback to the subject. The subject is instructed to move the hand towards the target until the distance is 10 cm. The video camera records the hand's position and the target's position. The computer calculates the distance between the hand and the target and provides feedback to the subject. The subject is instructed to move the hand towards the target until the distance is 10 cm.

^a The number of subjects who were included in each group.

$\frac{1}{2} \times \frac{1}{2} = \frac{1}{4}$ $\frac{1}{4} + \frac{1}{4} = \frac{2}{4} = \frac{1}{2}$
