FAMOUS TATE OF BRANDON, INC.

Figure 1. Schematic representation of the experimental design. The subjects were divided into two groups: the control group (CG) and the experimental group (EG). The CG was subjected to a control protocol (CP) and the EG to an experimental protocol (EP). The CP consisted of a 10-min rest period followed by a 10-min work period. The EP consisted of a 10-min rest period followed by a 10-min work period. The work period was divided into two phases: a 5-min phase of low intensity (LI) and a 5-min phase of high intensity (HI). The LI phase was performed at 50% of the maximum heart rate (HR_{max}) and the HI phase at 80% of HR_{max}. The subjects were then subjected to a 10-min recovery period. The subjects were then subjected to a 10-min rest period followed by a 10-min work period. The work period was divided into two phases: a 5-min phase of low intensity (LI) and a 5-min phase of high intensity (HI). The LI phase was performed at 50% of the maximum heart rate (HR_{max}) and the HI phase at 80% of HR_{max}. The subjects were then subjected to a 10-min recovery period. The subjects were then subjected to a 10-min rest period followed by a 10-min work period. The work period was divided into two phases: a 5-min phase of low intensity (LI) and a 5-min phase of high intensity (HI). The LI phase was performed at 50% of the maximum heart rate (HR_{max}) and the HI phase at 80% of HR_{max}. The subjects were then subjected to a 10-min recovery period.
